

Creating stronger, more vibrant and sustainable communities across BC

Smart Planning for Communities (SPC) offers local and First Nations governments the services of skilled Sustainability Facilitators in communities across British Columbia.

SPC provides resources and tools for planning socially, culturally, economically and environmentally sustainable communities.

We offer practical and current information and advice on integrated community sustainability planning. SPC also helps to build mutually beneficial partnerships through an information-sharing and resource network.

The result is stronger, more vibrant and sustainable communities.

Our Facilitators

SPC Sustainability Facilitators bring a depth and breadth of expertise to support communities in all stages of sustainability planning. Working with a wide array of experts in the field of sustainability planning and implementation, the SPC team offers assistance in multiple areas.

Our Services

PROCESS ADVICE

SPC offers advice and assistance for communities interested in developing and implementing sustainability plans or planning processes. This includes assistance with:

- assessing capacity for developing an integrated sustainability plan or planning process
- accessing information and support to meet your community's specific needs and goals
- selecting sustainability principles, frameworks and indicators that "fit" your community
- integrating sustainability principles and objectives into existing planning processes
- establishing effective working relationships, collaboration and partnerships related to sustainability planning and implementation

STRATEGIC SUPPORT

SPC assists communities with:

- determining the support needed for integrated sustainability planning and related projects
- identifying opportunities for community engagement
- finding and accessing funding
- making connections by linking communities with experts and advisors that meet their unique needs

EDUCATION AND TRAINING

SPC will host learning forums for communities where public, private and other organizations can disseminate best practices and lessons learned in particular areas of sustainability planning. The forums provide an excellent opportunity to build relationships within and among communities and sectors and support inter-organizational learning.

TECHNICAL EXPERTISE

SPC responds to community requests for technical expertise on specific sustainability issues and topics by providing in-house advice or connecting communities with experts from our pool of partners in the SPC Resource Network.

SPC WEBSITES

SPC provides easy access to online tools, resources and information for local and First Nations government staff, complementing the “hands-on” support of our Sustainability Facilitators.

Spend More Time with SPC

Contact us for information on our enhanced services and learn about more ways SPC can help your community.

FUNDERS GROUP

Smart Planning for Communities is administered by the Fraser Basin Council on behalf of a Funders Group. For more information go to www.smartplanningbc.ca.

SPC PRINCIPLES

Long-term thinking: planning processes and plans are future-oriented to enhance sustainability and take into account implications for future generations.

Broad scope: planning processes and plans reflect the communities' environmental, economic, social and cultural sustainability, including governance systems. They may also reflect a broad geographic or (bio-)regional approach.

Integration: planning processes and plans reflect a coordinated approach to enhance community sustainability through linkages between different types of plans or planning activities as well as across departments and organizations.

Collaboration: planning processes engage community members and other partners to support community sustainability (e.g. First Nations, neighboring communities, NGOs, private sector, other levels of government).

Public engagement & education: planning processes are designed to enhance public understanding, participation and input.

Implementation: plans are living documents that are kept off the shelves and put into action.

Monitoring & evaluation: setting targets and tracking results to celebrate progress and focus efforts on areas needing improvement.

THE FRASER BASIN COUNCIL is a non-profit society that brings people together to advance sustainability in the Fraser River Basin and throughout British Columbia. The Council works in support of healthy ecosystems, vibrant economies and strong communities, reports on progress towards a more sustainable river basin and facilitates the resolution of complex sustainability issues.
